

# FAG Motion Guard – the intelligent lubricators

**COMPACT, CHAMPION, CONCEPT 6** 

## FAG Motion Guard – the intelligent lubricators

Correctly lubricated rolling bearings are very reliable machine elements with a long service life. Almost 50 % of all cases of bearing damage are caused by insufficient or incorrect lubrication. Bearing damage can be very costly. Whether in the steel industry, in wind turbines, in the paper industry, in the mining or in the automotive industry - bearing damage in motors, pumps, generators or rotor systems frequently causes unscheduled downtime. In many cases, this means production loss and repair costs that often amount to tens of thousands of euros.

#### Safety and economy – prevent damage with **FAG Motion Guard**

You can prevent such damage by using automatic lubricators from the FAG Motion Guard line.

#### Your advantages:

- Individual and precise supply to each bearing location with the lubricant most suited to your application
- No costly central lubrication system required
- Fully automatic, maintenancefree operation thanks to constant relubrication
- Longer bearing life and longer maintenance intervals
- Higher level of machine availability

• Considerable cost savings

#### Be on the safe side with **FAG Motion Guard!**

Depending on the application and cost situation, you can decide for yourself which lubricator from the FAG Motion Guard line is the most suitable and most economic one for your purposes. With FAG Motion Guard COMPACT, Motion Guard CHAMPION or Motion Guard CONCEPT 6 you are always on the safe side!

#### Always a good choice with the FAG Motion **Guard Select Manager**

The new FAG Motion Guard Select Manager 2.0 makes it easier to select the lubricator most suited to your purposes. Simply order a free copy of the CD-ROM! With the Motion Guard Select Manager you can also select the Arcanol rolling bearing grease most suited to your application and determine the ideal discharge period. SELECT MANAGER 2.0 (E(D)

## Motion Guard line: maintenance-free, safe and economical

#### Robust and reliable – FAG Motion Guard COMPACT

This automatic lubricator has an electrochemical drive system. The electrolyte is environmentally friendly citric acid.

- Precise supply to each bearing location
- Maintenance-free and economical
- No manual relubrication required
- Electrochemical drive system
- Adjustable to 4 discharge periods
- Can build up a pressure of up to 4 bar
- Many accessories

The champ among the lubricators – FAG Motion Guard CHAMPION tion Guard Compac

The automatic lubricator Motion Guard CHAMPION has an electromechanical drive system. The robust, electronically controlled gear motor can be reused.

- Universal usability
- Individually adaptable to each bearing location
- Extremely robust thanks to effective protection from dust and splash water
- Continuous, automatic relubrication
- Electromechanical drive unit
- Electronically controlled gear motor, can be reused
- Battery set can be changed
- Can build up a pressure of up to 5 bar
- Suitable for grease canisters of different sizes and all Arcanol lubricating greases

# FAG Motion Guard CONCEPT 6 – the intelligent lubrication system

This single- and multi-point lubrication system can supply up to six different lubricating points with grease – constantly, precisely and independent of temperature.

- Convenient top quality lubrication system
- For extreme applications, indoors and outdoors
- Discharges precise amounts of lubricant over extended periods
- Operating pressure of up to 25 bar for longer distances
- Easy, user-friendly, menu-guided operation
- High level of variability
- Exact, quick visual information on LED display

#### 2 versions:

- CONCEPT 6: independent, battery-operated lubrication system
- CONCEPT 6 CONTROL: machine-controlled lubrication system; communication with PLC

Both versions are available as a single-point lubrication system and as a multi-point lubrication system.

### CONCEPT 6 and Easy Check – the ideal combination for even greater safety

Combined with the FAG EasyCheck rolling bearing monitoring system, the lubrication systems CONCEPT 6 and CONCEPT 6 Control make a complete, reliable safety package for critical bearing locations, either as a singlepoint or multi-point lubrication system. These independent systems are compatible and can be connected directly to the lubricating point.

## **FAG Arcanol lubricants**

### For a longer bearing life: Arcanol – rolling bearing-tested grease

Arcanol rolling bearing greases ensure that bearings can be used to their full capacity. They ensure a good running behaviour, very safe operation and a long service life. Arcanol offers several times the safety of standard greases even though these special greases at first glance cost a little more. The new CD-ROM "FAG Motion Guard Select Manager 2.0" makes it easier to select the optimal Arcanol grease for your specific application.
